"We are not just a game. We are the infrastructure for football's digital economy — built from Brazil, designed for the world."

JONHNES CARVALHO · FOUNDER & CEO

00

Executive Summary.

The product is live. The technology is in production. The community is growing. The market is sending unambiguous signals.

THE PITCH

A football management game that *finally fits* in your pocket.

Olefoot is a mobile-first football management game powered by native generative AI. It occupies a market position that no current product serves: **the depth of Football Manager in sessions of 5 to 10 minutes**, accessible on any device, in Portuguese, with real AI embedded in the core of every decision.

The product is live. The technology is in production. The community is growing. And the market is sending unambiguous signals: EA Sports was acquired by the Saudi PIF consortium for **US\$55 billion in September 2025** — the largest private buyout in entertainment history. Football Manager 2026 Mobile ranks as the third most-played game on Netflix. Sorare reached a US\$4.3 billion valuation. The market is not a hypothesis. It is a fact, validated at scale.

Olefoot seeks **\$250,000 USD for 15% equity**, implying a pre-money valuation of **\$1.67 million**. This seed round funds 18 months of product development, user acquisition during the 2026 FIFA World Cup window, and the infrastructure to support 200,000+ active users. Under conservative projections, Olefoot reaches cash-flow positive by Month 6 and accumulates **\$481k in Year 1 revenue** across three core monetization streams.

01

Market Opportunity.

Football is the largest entertainment market on the planet. Mobile gaming is its fastest-growing distribution channel. We sit precisely at the intersection.

1.1 · GLOBAL FOOTBALL GAMING

A **\$103B** market.
And nobody serves the depth player.

Football is the largest entertainment market on the planet. Over **3.5 billion people** identify as fans — nearly half the global population. The translation of this passion into digital products is one of the most consistent growth trends in the gaming industry.

MARKET SEGMENT	SIZE / PROJECTION	SOURCE
Global mobile gaming IAP revenue	US\$ 81.7B	Sensor Tower 2025
Mobile gaming projected revenue	US\$ 103B	Newzoo 2026
Fantasy sports market	US\$ 24.9B	2024
Fantasy sports market projection	US\$ 56.4B	2030 · +15.2% CAGR
Football management game simulators	US\$ 3.8B	2024
Strategy games · % of mobile IAP revenue	21.4%	From only 4% of downloads
Battle pass / season pass market	US\$ 12.9B	PwC / Statista 2026

Strategy and RPG games generate 21.4% of total mobile IAP revenue from only 4% of downloads. Depth sells. Olefoot is a depth product.

SENSOR TOWER · MOBILE GAMING REPORT 2025

— 1.2 · LAUNCH MARKET

*Brazil is not a **secondary** market. It is the ideal one.*

Brazil is the most strategically valuable launch market in the world for a football management game — and we are based here. The gap is clear: a mobile-first, AI-native, Portuguese-language football management game does not exist.

MOBILE GAMERS

130M+

#1 in Latin America · ABRAGAMES 2024

SMARTPHONE PENETRATION

85%+

Of the adult population

FOOTBALL FANS

78%

Of Brazilians · Datafolha 2024

MOBILE MARKET GROWTH

+18%

Annual · above global average

TOP 3 GLOBALLY

Brazil ranks among the top 3 markets by mobile game downloads.

Source: SensorTower 2025. The infrastructure is ready, the demand is proven, and acquisition costs are still meaningfully below US/EU benchmarks.

+13% REVENUE GROWTH

Latin America led the world (ex-Middle East) in IAP revenue growth in 2024.

Brazil is the single largest contributor. The window to establish a category leader is open and finite.

Zero direct competition: no deep football management simulator exists in Portuguese. That is the exact space Olefoot occupies — not by accident, by design.

1.3 · DISTRIBUTION WINDOW

*The World Cup 2026 is a **once-per-generation** event.*

The 2026 FIFA World Cup — hosted across the United States, Mexico, and Canada — is the first edition with **48 national teams**, making it the largest in the tournament's history. It represents a once-per-generation moment of peak global football attention, occurring precisely during Olefoot's launch window.

ESTIMATED VIEWERS

5 Billion+

Worldwide during July 2026

2022 CUP EFFECT

+34%

Football app downloads globally

STRATEGIC IMPLICATION

This is the cheapest user acquisition window of the next decade.

All-time record engagement for football content. Brazilian national team participation drives domestic mobile gaming spikes. Sovereign and content interest in football peaks for ~60 days. Olefoot's marketing thesis — Phase 1 GTM — is timed precisely to this curve.

02

The Problem We Solve.

There is a football fan who has been invisible to the gaming industry for over a decade. He grew up with Elifoot.

2.1 · THE INVISIBLE PLAYER

*28 years old. 10 minutes on the bus.
He has never been served.*

There is a football fan who has been invisible to the gaming industry for over a decade.

He grew up with **Elifoot** — the Portuguese-language football simulator launched in 1990 that proved Brazilians love deep tactical simulation. He played **Football Manager** through his university years but no longer has three hours for a single session. He has **FIFA** on his phone but it feels like a slot machine.

He is 28 years old. He has 10 minutes on the bus. He has a mid-range Android phone. He speaks Portuguese. He wants depth. He wants decisions that matter. He has never been served.

Football Manager is brilliant — and inaccessible. EA FC is spectacular — and hollow. Mobile football games are designed to extract money, not create experience.

OLEFOOT · PRODUCT THESIS

Olefoot is the answer for the invisible player. A deep tactical simulator he can play in 5 minutes between subway stops, in his language, on the phone he already owns, with AI that respects his intelligence.

2.2 · COMPETITIVE GAPS

*Every incumbent has an **unfixable** gap.*

PRODUCT	CORE PROBLEM	WHAT OLEFOOT PROVIDES
Football Manager SEGA · Netflix	Minimum session: 1 hour. Desktop-first. No real mobile version. No generative AI. No PvP.	5-min sessions. Mobile-native. AI in every decision.
EA FC / Ultimate Team Electronic Arts	Pay-to-win. No tactical simulation. Loot boxes. Cards are static. No manager progression.	Transparent economy. Deep tactics. Agents that evolve.
Sorare SoftBank-backed	No match engine. Results calculated from real-world stats. No AI agents. 100% dependent on expensive club licenses.	Full match simulation. 22 AI agents per match. Own player creation.
Top Eleven Take-Two · 2010	Launched 2010. Dated mechanics. No generative AI. No real match engine. Artificial token economy.	2026 architecture. Native AI. Real economy built on player value.
Hattrick Est. 1997	1990s interface. No mobile native. No AI. No modern economy.	Modern stack. Edge CDN. AI-native. Economic depth.

THE SYNTHESIS

Football Manager depth + Elifoot's Brazilian soul + Sorare's digital asset economy.

On mobile. In Portuguese. With AI at its core. **That is Olefoot.**

03

The Solution. Olefoot.

A Football Fantasy Game Driven by AI+. Mobile-first, browser-based,
in Portuguese — where every decision matters.

3.1 · WHAT OLEFOOT IS

Football management, reimagined as an AI-native product.

Olefoot is a **Football Fantasy Game Driven by AI+** — a mobile-first, browser-based football management simulator where every player is an autonomous AI agent, every match has a narrative, and every decision by the manager has real tactical consequence.

It is not Football Manager. It is not EA FC. It is not Sorare. It is the product those three companies collectively proved the world wants — and collectively failed to deliver in a single, accessible, intelligent package.

3.2 · THE PLAYER JOURNEY

Eight tiers. Lifetime EXP. Never resettable, never purchasable.

01	02	03	04	05	06	07	
<i>Fraldinha</i>	<i>Juvenil</i>	<i>Amador</i>	<i>Profissional</i>	<i>Campeão</i>	<i>Internacional</i>	<i>Raro</i>	<i>L</i>

EXP is vitalício (lifetime) — never resettable, never purchasable. Each tier is earned, not bought. Prestige has real meaning. Signature Moves (Bicycle Kick, Trivela, Panenka) unlock through attribute thresholds and XP requirements, not microtransactions.

— 3.3 · CORE PRODUCT FEATURES

Six systems. One product.

01 · MATCH NARRATOR

GameSpirit AI

Not a chatbot — the referee, commentator, and tactical advisor integrated frame-by-frame into the simulation loop. Resolves shots, builds story arcs, decides penalties. Powered by Anthropic Claude via Railway API.

02 · TACTICAL GEOMETRY

SmartField · Tactical Slim Loop

Python-generated zones, positional anchors, radius of influence. Exported as JSON, consumed by the match engine at **zero runtime cost**. The Tactical Slim Loop runs every match minute — reading field state, updating agent targets, resolving collisions — all client-side.

03 · AUTONOMOUS PLAYERS

Yuka Agents · 22 per match

Each player is an independent AI agent using Yuka steering behavior. They respond to ball position, team phase, opponent pressure, and individual DNA (riskTaking, buildUpPreference, pressIntensity). The field is alive.

04 · AGENT BRAIN

Decision with AI · Four Simultaneous Engines

BehaviorAI (pressingTrap, tacticalFoul), PolishAI (desperation, momentumBuff), OffBallAI (visionCone, bendingRuns, scanToken) and PlayerDecisionAI (prethinking, spatialMemory, onBallDecision) run in parallel — every agent thinks, reads the game, and adapts in real time.

05 · LEGACY MODE

Agents + Skills · The Agent Economy

Real players transformed into digital cards with autonomous AI agents trained on their tactical DNA. Skills (Pressing Trap, Captain Influence, Desperation Mode) modify agent behavior in specific match situations — purchased, traded, or unlocked through achievements. Every

06 · LIQUIDITY ENGINE

Market Maker + Async PvP

Instant buy offers for any player with dynamic pricing. Matchmaking uses OVR differential of ± 10 against real managers' squads. Results generate EXP and League Points regardless of online status. The market never stops. Revenue never stops.

04

Technology Architecture.

AI runs at creation time, not at runtime. The marginal cost of every match played is effectively zero.

4.1 · SYSTEM ARCHITECTURE

Five layers. One *strategic* decision.

Olefoot is built on a five-layer architecture designed around a critical strategic decision: **AI runs at creation time, not at runtime.** This means the marginal cost of every match played is effectively zero.

Data flow: Manager → Browser → Motor (client) → Supabase (sync). Tactical decisions → Railway → Claude → Contextual response. **Matchmaking:** manager_squad → fetchOpponentSquads → OVR ±10 → match. **Market:** squad → calcMarketMakerOffer → EXP immediate → inventory.

4.2 · TECHNOLOGY STACK

Production-grade. Already shipped.

LAYER	TECHNOLOGY	STRATEGIC RATIONALE
Frontend	React 18 · Zustand · TypeScript · Vite	Universal browser support. Zero install friction.
Match Engine	TypeScript pure · Yuka agents · SmartField (Python)	Client-side execution = \$0 per match in AI costs.
AI Runtime	Anthropic Claude (via Railway / Hono)	8 specialized API routes. Contextual, not generic.
Database	Supabase (Postgres · Auth · Realtime · RLS)	Row-level security. Real-time sync. Scalable from day 1.
CDN / Deploy	Cloudflare Pages + Workers	Global edge. Zero cold start. Latency < 30ms worldwide.
API Server	Railway (auto-deploy · Node.js)	Instant deploys. Isolated from frontend scaling.

4.3 · THE ARCHITECTURAL DECISION

AI at creation, not at runtime.

Most AI-native games generate responses at runtime: every player action, every match event, every piece of narrative costs an API call. As the user base grows, so does the AI bill — often exponentially. This is the "AI scaling trap" that has broken several well-funded startups.

Olefoot inverts this model. Claude is used **once per player creation** — to generate the player's DNA: attributes, behavioral traits, personality, Signature Moves, narrative backstory. Once generated, this DNA is stored in Supabase and consumed by the match engine with no additional API calls.

COST OF AI PER MATCH PLAYED

\$0

After initial player DNA generation

1 MATCH VS 1,000,000 MATCHES

Identical

Marginal cost is invariant — this is the architecture that scales.

05

The Agent Economy. Legacy Mode.

What if a real football player could exist inside the game — as an autonomous AI agent trained on his own tactical DNA?

5.1 · WHAT LEGACY MODE IS

A Ronaldinho card that plays like Ronaldinho.

In Legacy Mode, any professional footballer can be transformed into a digital card with their own DNA — real attributes, career history, playing style. With the advancement of AI agents, each card now carries an autonomous agent that makes decisions inside the match based on the real player's profile.

A Ronaldinho in Legacy Mode is not just a card with 92 dribbling. **It is an agent that prefers to receive with its back to goal, that activates pressingTrap when morale is high, that executes dummyRun at the right moments** — because the agent was trained with that player's tactical DNA.

5.2 · THE AGENT CREATION PIPELINE

STEP 1 · PLAYER DATA INPUT

Real player (historical stats, style) OR Manager description
"Fast striker, left-footed, counter-attack specialist"

↓

STEP 2 · CLAUDE DNA GENERATION (1× API call — never repeated)

- Attributes: pace, finishing, passing, tackling, vision, strength
- Behavioral traits: riskTaking, buildUpPreference, offensiveRuns
- Signature Moves: unlockable via XP thresholds
- Narrative: career backstory, personality, preferred conditions

↓

STEP 3 · DNA STORED IN SUPABASE

Player card minted as unique digital asset

↓

STEP 4 · AGENT RUNTIME (zero AI cost per match)

Match engine reads DNA snapshot → Yuka agent decides
pressingTrap fires if morale > 80 + opponent in pressing zone
dummyRun executes if time > 70min + team losing by 1 goal
captainInfluence boosts nearby teammates

↓

STEP 5 · EVOLUTION (EXP accumulation)

Goals, assists, performance → XP → new Signature Moves unlock
Agent evolves. DNA expands. Card value increases.

5.3 · SKILLS SYSTEM

*Skills are not cosmetic.
They **change** how the team plays.*

Skills are special abilities that modify how an agent behaves in specific match situations. Purchased, traded, or unlocked through achievements. The right skill combination is a real tactical differentiator.

SKILL	BEHAVIOR TRIGGERED	RARITY
Pressing Trap	Agent forces opponent error in defensive third; triggers coordinated press.	RARE
Sweeper Keeper	Goalkeeper actively intercepts through balls outside penalty area.	COMMON
Captain Influence	Boosts morale and action probability of adjacent teammates by 12%.	EPIC
Desperation Mode	Final 15 minutes losing: agent risk tolerance increases dramatically.	RARE
Dummy Run	Creates space for ball carrier through coordinated off-ball movement.	COMMON

Every invested real changes the outcome on the field. This is the retention mechanism that no other mobile football game has.

OLEFOOT · SKILLS SYSTEM

— OLEFOOT · 2026 · SECTION 05

The Age of Agents.

In other games, you buy a card and it is static. In Olefoot, you buy an agent — and it evolves, learns, has morale, has fatigue, has spatial memory of previous matches. Monetization is not cosmetic. It is functional.

5.A · HOW LEGACY MODE WAS BUILT

What if a real blaver could exist inside the game?

Legacy Mode was born from a simple question: what if a real footballer could exist inside the game? In Olefoot, any professional player can be transformed into a digital card with their own DNA — real attributes, career history, playing style. But we went further.

With the advancement of AI agents, each card now carries an autonomous agent that makes decisions inside the match based on the real player's profile. A Ronaldinho in Legacy Mode is not just a card with 92 dribbling. **It is an agent that prefers to receive with its back to goal, that activates pressingTrap when morale is high, that executes dummyRun at the right moments —** because the agent was trained with that player's tactical DNA.

5.B · THE AGENT CREATION PIPELINE

```

STEP 1 · PLAYER DATA INPUT
  Real player (historical stats, style) OR Manager description
  "Fast striker, left-footed, counter-attack specialist"
↓
STEP 2 · CLAUDE DNA GENERATION      (1× API call — never repeated)
  → Attributes: pace, finishing, passing, tackling, vision, strength
  → Behavioral traits: riskTaking, buildUpPreference, offensiveRuns
  → Signature Moves: unlockable via XP thresholds
  → Narrative: career backstory, personality, preferred conditions
↓
STEP 3 · DNA STORED IN SUPABASE
  Player card minted as unique digital asset
↓
STEP 4 · AGENT RUNTIME                (zero AI cost per match)
  Match engine reads DNA snapshot → Yuka agent decides
  pressingTrap fires if morale > 80 + opponent in pressing zone
  dummyRun executes if time > 70min + team losing by 1 goal
↓
STEP 5 · EVOLUTION                    (EXP accumulation)
  Goals, assists, performance → XP → new Signature Moves unlock
  Agent evolves. DNA expands. Card value increases.
  
```

5.C · LEGACY AGENT · CASE STUDY

Diego Lugano
plays like Diego Lugano.

Olefoot's official ambassador is also its most powerful proof of concept. Diego Lugano — former Uruguay national team captain, Copa América veteran, São Paulo FC legend — exists inside Olefoot as a fully autonomous AI agent trained on his real tactical DNA.

AGENT DNA · GENERATED BY CLAUDE

LUGANO · CB · OVR 88

pace: 72 strength: 91
tackling: 90 vision: 78
leadership: 96 aerial: 93

riskTaking: LOW
buildUpPreference: SHORT_PASS
pressIntensity: HIGH
captainInfluence: ACTIVE

Signature Moves:
✓ Captain Influence (unlocked)
✓ Aerial Dominance (unlocked)
→ Sweeper Keeper (XP: 4,200 / 5,000)

Morale: 94 · Fatigue: 12%
spatialMemory: last 3 matches

IN-MATCH BEHAVIOR

*He reads the game like the real
Lugano.*

When morale > 85, Captain Influence activates — boosting adjacent teammates by 12%. In the final 10 minutes of a draw, his risk tolerance increases. He organizes the defensive line, calls the press, and wins aerial duels at 93% success rate.

WHY LUGANO JOINED

*Conviction before a financial
offer.*

He chose to join Olefoot before a formal financial offer — because the project resonated with his understanding of how football culture and technology should intersect. His endorsement is not commercial. It is conviction.

*"This is the first time I've seen a game that actually
understands how a defender thinks. My agent plays the way
I played."*

5.D · HOW THE AGENT ECONOMY MONETIZES

Six revenue lines

Every dollar *changes the game.*

PRODUCT	WHAT THE MANAGER GETS	PRICE (USD)
Professional Player Cards Licensed · real DNA	A card with the real player's attributes, career history, and a fully autonomous AI agent trained on their tactical profile. Limited editions by season and rarity.	\$2 — \$60
AI-Generated Player Cards Unique · manager-described	Manager describes the player: "fast striker, left-footed, counter-attack specialist." Claude generates the full card — name, attributes, skills, behavioral agent. Each is unique. No two managers will ever have the same player.	\$3 — \$30
Skills Tradeable · functional	Pressing Trap, Sweeper Keeper, Captain Influence, Desperation Mode — each modifies how the agent behaves in specific match situations. Purchasable, tradeable on the marketplace, or unlocked through achievements.	\$1.50 — \$16
AI Agent Upgrades Basic → Legend	Basic agents make simple decisions. Premium agents have carrierMacroBrain, prethinking, visionCone, and spatialMemory — they read the game deeper, adapt to match context, and make faster decisions under pressure.	\$4 — \$40
Club Structures Permanent upgrades	Youth Academy, Medical Center, Tactical Lab, Stadium — each unlocks real in-game capabilities: faster training, faster injury recovery, higher prospect ceilings.	\$5 — \$20
Consumable Items Short-cycle economy	Morale boost before a decisive match, injury recovery accelerator, special contract that raises a player's evolution ceiling, renewal item with no cost.	\$1 — \$4

Every invested dollar changes the outcome on the field. This is the retention mechanism that no other mobile football game has built.

06

Business Model & Revenue.

Monetization through depth, not manipulation. Every purchase delivers real, functional value that changes how the team performs.

— 6.1 · REVENUE ARCHITECTURE

Eight streams. Zero loot boxes.

Olefoot operates on a freemium model with monetization through depth, not manipulation. There are no loot boxes, no pay-to-win mechanics, no opaque spending systems. Every purchase delivers real, functional value that changes how the team performs.

6.2 · REVENUE STREAMS · 500K ACTIVE USERS

Year-3 target. Modeled from the bottom up.

PROFESSIONAL PLAYER CARDS

TIER	PRICE	VOLUME / MONTH	MONTHLY REVENUE
Bronze	\$2.00	5,000	\$10,000
Silver	\$6.00	2,000	\$12,000
Gold	\$18.00	500	\$9,000
Legend (limited)	\$60.00	100	\$6,000
Subtotal · Professional Cards			\$37,000

AI-GENERATED PLAYER CARDS

TYPE	PRICE	VOLUME / MONTH	MONTHLY REVENUE
Basic AI card	\$3.00	3,000	\$9,000
Premium AI card	\$10.00	800	\$8,000
Legend AI generation	\$30.00	150	\$4,500
Subtotal · AI Cards			\$21,500

Note on conversion: 12% paying conversion targets the mid-core gaming demographic (sports management). Industry average for all mobile games is 1.83% (Unity 2024); strategy and RPG titles average 8–15%. Olefoot's engagement model is designed to drive above-average conversion through functional, non-manipulative monetization.

6.2 · CONSOLIDATED REVENUE AT SCALE

500k users.
\$2.24M ARR.

REVENUE STREAM	MONTHLY (USD)	ANNUAL (USD)
Professional Player Cards	36,830	441,960
Season Pass (Standard + Premium)	34,870	418,440
Skills (Common + Rare + Epic)	27,394	328,728
Club Structures	24,938	299,256
Consumable Items	23,690	284,280
AI-Generated Cards	21,394	256,728
AI Agent Upgrades	17,134	205,608
TOTAL 500k users · 12% paying conversion	\$186,250	\$2,235,000

MONETIZATION PHILOSOPHY

Depth, not manipulation.

No loot boxes. No pay-to-win. Every purchase changes how the team performs on the field — it's an investment in tactics, not a gamble.

DIVERSIFICATION

No single stream > 20% of revenue.

Eight independent revenue lines from transactional, subscription, and B2B sources. Resilient by design.

07

08

Competition & Validation.

The thesis does not rely on creating a new market. It relies on the fact that three separate markets have each been validated at scale.

8.1 · POSITIONING MAP

The empty quadrant

Tactical Depth × Mobile Access.

Olefoot occupies the empty quadrant: **Tactical Depth + Mobile Access**. No current product serves this combination. The depth incumbents (Football Manager, Hattrick) are desktop-tied or 1990s-architected; the mobile incumbents (EA FC, Top Eleven) are shallow by design. Sorare is a card market without a match engine. **This is the gap.**

WHY THIS GAP EXISTS

Depth-on-mobile was technically impossible until 2024.

22 autonomous AI agents simulating a football match on a mobile browser, with narrative resolution, pre-computed tactical geometry, and zero per-match AI cost — the architectural ingredients only matured in the past 24 months. Olefoot is the first product engineered for this moment.

8.2 · MARKET VALIDATION

The giants showed the way.

MARKET SIGNAL	WHAT IT PROVED	WHAT OLEFOOT DOES BETTER
EA Sports acquired by Saudi PIF for \$55B Sept 2025 · Largest private buyout in entertainment history	Football games are the largest entertainment asset class in the world. Sovereign capital is mobilizing.	Olefoot is the mobile-first, AI-native, Portuguese-language alternative that no acquisition can quickly replicate.
Sorare raises \$680M at \$4.3B valuation SoftBank-led	Digital football player cards with real-world value — the NFT fantasy model at scale works.	Olefoot adds a real match engine, autonomous AI agents, and skill-based gameplay — not just card trading.
Football Manager 26 Mobile #3 most-played game on Netflix globally	Deep football management content drives sustained engagement even on a subscription platform.	Olefoot delivers FM depth natively on mobile, with PvP and AI — without the FM barrier to entry.
Elifoot (1990) 30+ years of Brazilian football sim passion	Brazilian football fans have been hungry for deep simulation for three decades. Cultural demand is proven.	Olefoot is Elifoot's spiritual successor — in the palm of your hand, with AI, in 2026.

09 · GO-TO-MARKET STRATEGY

Three phases One World Cup.

PHASE 1 · M1-M4

World Cup 2026

Public launch with Brazilian tech press and gaming media PR. **Diego Lugano** activation: organic content, social posts, commentary. 50+ contracted champions as first micro-influencers — real players recommending a real game. Targeted Meta + Google: \$1k/mo, Brazil-first.

PHASE 2 · M5-M12

Community & Leagues

OLE Pass launch — first recurring subscription revenue. Private league tournaments. Content creator partnerships (FM + EA FC YouTubers / TikTokers). Legacy Mode beta: first batch of champion cards. First **OLE Summit Brasil** — community gathering, press event, investor showcase.

PHASE 3 · YEAR 2

Regional Scale

Native iOS + Android (PWA → native). South American club partnerships (Argentina, Colombia, Uruguay). Spanish-language expansion. Institutional sponsorship deals. **OLEXP token ecosystem** launch (on-chain asset layer).

9.4 · DISTRIBUTION CHANNELS

CHANNEL	MECHANISM	TARGET
Organic · Player ambassadors	50+ contracted players share their own cards/results	Football fan communities, player fan bases
Content creators	FM + EA FC YouTube/TikTok creators	Existing football game audience already primed
Paid acquisition	Meta + Google · \$1k/month seed phase	25–40 male, football fan, Brazil-first
PR / Media	Cointelegraph, Exame already covered	Investor community, tech-savvy football fans
Grupo Figer network	Brazil's largest sports marketing group — strategic partner	Club partnerships, sponsorship, athlete access

— 10 · PRODUCT ROADMAP

Five years. From *Cup* to *platform*.

2026
Q1–Q2
MVP + LAUNCH

ALREADY SHIPPED · WORLD CUP LAUNCH

- ✓ Match engine (22 Yuka agents, client-side)
- ✓ Career Tiers (8 levels)
- ✓ Asynchronous PvP · OVR matchmaking
- → World Cup 2026 public launch
- ✓ GameSpirit AI narrative (Claude)
- ✓ Market Maker · guaranteed liquidity
- ✓ 50+ player contracts signed
- → First OLE Summit Brasil

2026
Q3–Q4
MONETIZATION

SUBSCRIPTION · COMMUNITY · MARKETPLACE

- → OLE Pass live (\$4 — \$10/mo)
- → Skills marketplace open
- → Legacy Mode beta — first cards
- → Private leagues + seasonal tournaments

2027
EXPANSION

NATIVE MOBILE · LATAM ROLLOUT

- → Native iOS + Android (PWA → native)
- → Spanish launch (MX, AR, CO)
- → South American club partnerships
- → Social impact: youth academies

2028
GLOBAL SCALE

25K LICENSED CARDS · OLEXP ON-CHAIN

- → Mass tokenization · 25,000 player cards
- → Top 1,000 on CoinMarketCap
- → OLEXP on-chain economy launch
- → International expansion beyond LATAM

2029

502,614 ACCOUNTS · \$2.24M ARR · PLATFORM DOMINANCE

- → "Half a Million Reasons" milestone (2029)
- → 1.5M+ accounts (2030)
- → Full ecosystem: clubs, legends, federations
- → Licensing API for third-party developers

2030
PLATFORM

11 · THE TEAM

Seven years building. Zero external funding.

11.1 · FOUNDER & CEO

Jonhnes Carvalho

Building Olefoot since 2018 — seven years of continuous development, zero external funding, consistent participation in global startup competitions. Born and raised in Campo Grande, Mato Grosso do Sul, he has taken the project from a personal passion for football simulation to a production-grade platform with 250,000 registered users.

2018	Olefoot project begins — first match engine prototype
2020–2023	Multiple global startup competition participations
2024	First CoinTelegraph Brasil and Exame / Future of Money coverage
2025	50+ player contracts signed with Brazilian and South American champions
2026	Diego Lugano joins as official ambassador · Grupo Figer partnership formalized

Contact: exp@olefoot.com · +55 67 99322-6559 · linkedin.com/in/johnnescarvalho

11.2 · OFFICIAL AMBASSADOR

Diego Lugano

Former Uruguay national team captain. Three-time Copa América participant. Former São Paulo FC legend. He chose to join Olefoot **before a formal financial offer** — because the project resonated with his understanding of how football culture and technology should intersect. His endorsement is not commercial. It is conviction.

11.3 · STRATEGIC PARTNER

Andre Figer · Grupo Figer

One of Brazil's largest sports marketing and entertainment groups. The Olefoot–Figer partnership provides access to a network of clubs, athletes, brands, and distribution infrastructure that **cannot be replicated with capital alone**. This is Olefoot's smart money.

\$100k · Mobile app development — PWA → native iOS + Android

30%

\$75k · World Cup 2026 marketing campaign and user acquisition

20%

\$50k · Infrastructure scaling — Supabase, Railway, Cloudflare growth tier

10%

\$25k · Legal, IP registration, club partnership contracts

12.3 · WHY NOW

Three independent forces converge in 2026 to create a market entry window that will not repeat:

1. The FIFA World Cup 2026 creates peak global football engagement — a once-per-generation distribution opportunity.
2. EA Sports' \$55B acquisition signals that football gaming is the most valuable entertainment asset category in the world.
3. Generative AI has matured to the point where 22 autonomous agents can simulate a football match on a mobile browser — this was technically impossible 3 years ago.

The market is ready. The technology is ready. The team has been building for 7 years. The window is now.

12.4 · RETURN SCENARIOS

*Up to **8.4×** upside
on a 15% stake.*

SCENARIO	REVENUE (YEAR 3)	VALUATION MULTIPLE	15% STAKE VALUE
Conservative 500k users · 12% conv.	\$2.24M / yr	5×	\$1.68M
Base 500k users + sponsorship	\$3.0M / yr	6×	\$2.70M
Optimistic 1M users · regional expansion	\$7.0M / yr	8×	\$8.40M

*We are not just a game. We are the infrastructure for
football's digital economy — built from Brazil, designed for
the world.*

JONHNES CARVALHO · FOUNDER & CEO

APPENDIX A · DATABASE SCHEMA

Supabase tables overview.

profiles	manager_squad	manager_game_state
display_name	players[]	finance / EXP
club_name	lineup	inbox
onboarding	formation	results
	avg_ovr	streaks
global_league	market_maker_inventory	market_activities
rodadas	snapshots_sold	public feed
standings	pricing_matrix	transaction history
fixtures		

APPENDIX B · API ENDPOINTS — CLAUDE INTEGRATION

Railway · Hono · Node.js.

ENDPOINT	FUNCTION
POST /api/coach	Analyzes squad, suggests formation/training
POST /api/gamespirit	Match narrative resolution (goals, penalties)
POST /api/assistant	Ole Smart Hub — answers manager questions
POST /api/voice	Natural language → GameAction conversion
POST /api/admin	Internal admin operations

Each route: context injection → Claude inference → structured response. **AI cost: called only on narrative/coaching events, not per simulation tick.**

APPENDIX C · GLOSSARY

Terms used in this whitepaper.

GameSpirit	The AI narrative engine that resolves match events (goals, penalties, red cards) and generates real-time commentary via Claude.
SmartField	Python-generated tactical geometry: zones, positional anchors, radius of influence. Pre-computed and served as JSON — zero runtime AI cost.
Yuka Agents	Independent steering-behavior AI agents for each of the 22 players on the field. Each agent reads DNA and field context to make autonomous decisions.
DNA	Player behavioral profile generated once by Claude: attributes, traits (riskTaking, buildUpPreference), Signature Moves, and narrative backstory.
Legacy Mode	The system for transforming real professional players into digital cards with autonomous AI agents trained on their tactical DNA.
OLEXP	The on-chain token representing value within the Olefoot economy. Layer 2 / Solana-compatible. Roadmap Year 2 launch.
EXP	Lifetime, non-purchasable experience points that determine career tier progression for the manager.
Market Maker	The system that guarantees instant liquidity for player card sales by providing dynamic buy offers based on position and OVR rating.
OVR	Overall Rating — composite metric calculated from player attributes (pace, finishing, passing, tackling, vision, strength).
